

# DISCONTINUED: WeatherLink Agri/Turf Module

## Product Images

## Short Description

WeatherLink Agriculture & Turf Module for enhanced reporting. This item has a 2-3 week lead time.

## Description

---

An optional module that can be added on to an existing WeatherLink installation. This module adds specialised reports for farmers, growers, and turf managers.

The module lets you view reports such as evapotranspiration and leaf wetness hours and lets you enter thresholds and start and end dates to better customise your reporting tools.

## Additional Information

Brand	Davis Instruments
Explanation	<p>This optional software module adds specialised reports for farmers, growers, and turf managers. With a user-defined 24-hour period and growing season you can track the weather according to your needs not the calendar's.</p> <p>You'll get evapotranspiration, chilling requirement, leaf wetness hours, and soil temperature hours—all with user-entered thresholds and starting and ending dates. Plus growing degree-days and temperature-humidity hours (with user-entered names of crops, pests, or diseases) and crop water management (with irrigation values and user-entered K-factor profiles).</p>
