# S-WDA-M003 Wind Direction Smart Sensor

## Product Images

---

## Short Description

---

The Wind Direction Smart Sensor is a research-grade plug-and-play sensor for measuring and logging wind data. It provides average wind direction for the measurement interval. This highly-durable wind vane has a drip overhang for anti-icing. Its shielded stainless-steel ball bearings and static-dissipating housing provide a long sensor long life. The sensor calculates a unit vector average of the wind direction, providing data directly in degrees.

## Description

---

The Wind Direction Smart Sensor is a research-grade plug-and-play sensor for measuring and logging wind data. It provides average wind direction for the measurement interval. This highly-durable wind vane has a drip overhang for anti-icing. Its shielded stainless-steel ball bearings and static-dissipating housing provide a long sensor long life. The sensor calculates a unit vector average of the wind direction, providing data directly in degrees.

NOTE: an M-CAA Full Cross Arm or M-CAB Half Cross Arm is required for mounting.

### **Environment:**

The S-WDA-M003 Sensor is for use in Indoor and Outdoor environments

### **Measurements:**

The S-WDA-M003 Sensor supports the following measurements :

Wind

## Additional Information

---

Brand	Onset HOBO
Measurements	Wind Direction
Compatible With	U30, H21, H22
