

TechnoLine WS 2816 Complete Weather Station with Wireless PC Connection & Weather Alerts

Product Images

Short Description

The TechnoLine WS2816 wireless home weather station provides you with complete weather data, including programmable weather alerts.

Description

At a glance, see your weather forecast, time, wind speed & direction, indoor & outdoor temperature & humidity, rainfall and air pressure reading with bar graph. Weather alerts including storm warning will help ensure you're ready for whatever weather comes your way.

Also features max/min readings over the past 24hrs, time, date and calendar. All the data you need is there in one sleek and modern design console.

Connects wirelessly to your PC, for storage and analysis of your weather data:

- Your computer receives weather data from your WS 2816 weather station via the supplied wireless transceiver that plugs into a USB socket in your PC.
- Using the free Heavy Weather Pro software, monitor and record a variety of data including both indoor and external values sampled by the various sensors.
- Review weather history data, and analyse trends and tendencies over time using the software's charts and graphing features.
- Weather alerts can also be set from the software.
