

TFA Black Point Rain Analogue Gauge

Product Images

Short Description

The black point rain gauge from TFA is a modern unit, ideal for either placing in to the ground, or mounting on a pole.

The large diameter of the cup allows more accurate readings to be taken, however, the increments are small enough for small amounts of rainfall to be measured.

Highlights

- Made in Germany
- Determines the rainfall easily and accurately
- Ideal for use in the garden and agriculture
- With large diameter and evaporation protection
- Weatherproof and robust.

Description

A modern rain gauge with a new, functional design made of weatherproof plastic for easy and exact determination of rainfall. You get very accurate readings due to the large diameter and the scale is easy to read, even with low rainfall.

The funnel-shaped lid protects against evaporation.

The practical holder can be either inserted directly into the ground or attached to a rod.

The product is entirely manufactured in Germany.

Function

- New, functional design
- Plastic
- Large diameter for highly precise measurement results, very good readability, also for small rainfall amounts
- Removable funnel-shaped lid (against evaporation)
- Holder for inserting directly in the ground or for mounting to a post
- Registered TFA design
- Made in Germany.
