Description

More than Weather Forecasting

The ACCUR8 weather station delivers more than just weather forecasting, temperature and humidity readings. It offers fascinating environmental insights right into your local area. With this device, you can effortlessly track sundown and sunrise timings, helping you connect more intimately with the natural rhythm of the day. Moreover, it also keeps you attuned to cosmic shifts as it displays the current phase of the moon and for those who live near the sea or have an interest it also displays the current state of the tides.

View all at Once

The colour screen display's all the current readings simultaneous.

This inclusive display removes the need to toggle between screens or readings, providing all live data at a single glance.

The barometric graph displays a historical record of the previous 12 hours helping you understand how the weather is changing in your area.

Weather Forecasts

Not to overlook, the ACCUR8 weather station can also help predict the local weather by utilising the barometric pressure. This intelligent feature provides you with a six-icon weather forecasting system, giving a visual depiction of the weather conditions expected in your area.

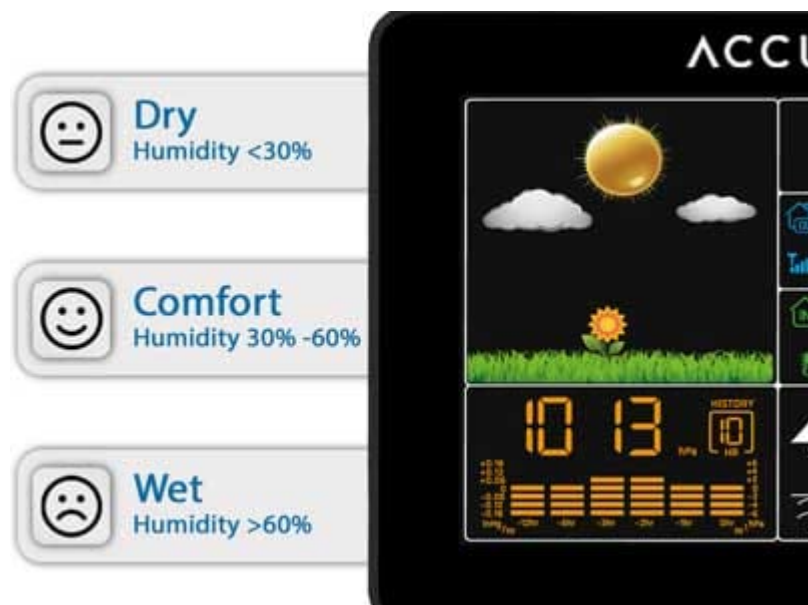

These icons range from showing 'sunny' for clear sky days all the way to 'cloudy' for overcast conditions. It doesn't stop there though; this weather station is smart enough to indicate 'rainy' or 'stormy' conditions when precipitation is anticipated and even 'snowy' when chillier temperatures are detected.

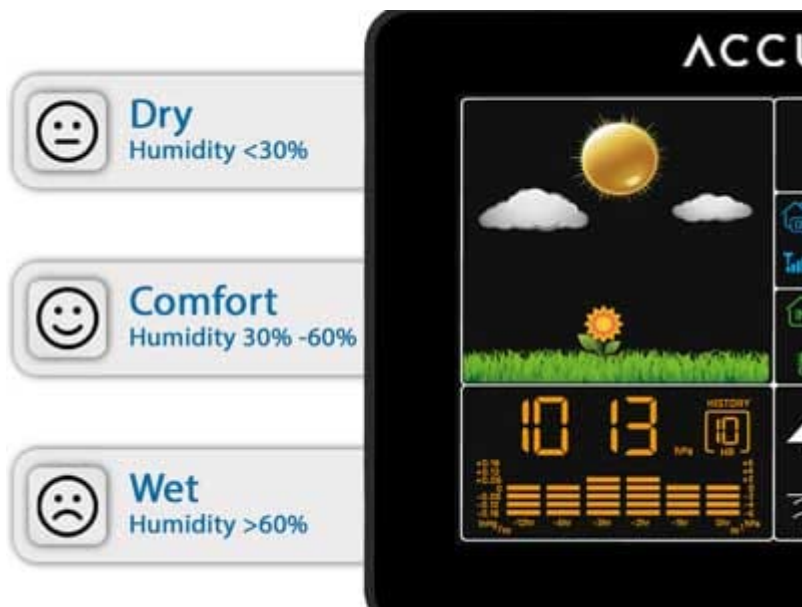

Providing real-time information on future insights relevant to your localised area, right from the comfort of your home.

Comfort Indicator

The station uses a varied facial expression to indicate the relative indoor comfort based on humidity. Proper humidity control can provide a multitude of benefits. For one, it can help prevent the condensation that leads to mould and mildew growth, ideal for those with allergies or asthma.

Aside from health implications, the right humidity level can prevent skin from becoming overly dry. Furthermore, it aids in thermal comfort, as higher humidity can make the air feel warmer, potentially helping to conserve energy by requiring less heating during winter. Thus, staying aware of your home's humidity levels can greatly contribute to your overall well-being.

Accurate Time & Alarm

The station also packs in an alarm clock with a convenient backlight. For great time keeping this, station incorporates the MSF time signal - recognised as one of the most accurate timekeeping technologies in the world. This means that your weather station will always reflect the precise time, keeping you consistently updated down to the second.

You're in safe hands

Having been in the business of selling weather equipment for more than two decades, we have dispatched over 18,000 orders just in the past twelve months.

As the owners of the ACCUR8 brand, you can rest easy knowing that you are supported by a UK-based company that has a great depth of knowledge and consistent customer support.

As a family-owned enterprise, we take pride in being the UK's leading independent weather specialist.

2 Year warranty as standard

With our own brand ACCUR8, we offer a hassle-free 2-year warranty with no need for filling out paperwork or submitting online registrations. You automatically receive a 2-year warranty upon purchase.

In the event that issues arise after the warranty period ends, we understand that you may require assistance or replacement parts. We have you covered – we offer all parts, including the console, at special discounted prices for customers who have purchased from us.

Retail Packaged

In contrast to many online brands, our ACCUR8 products are presented in attractive retail-style packaging. Say goodbye to plain white or brown boxes when gifting this item to a loved one. Additionally, it comes with a 3-Pin UK power supply, eliminating the need for uncommon EU adapter plugs often found in online purchases nowadays.

Key Features at a Glance

- Radio-controlled time from the MSF signal in the UK (always keeps accurate time and automatically adjusts for British Summer Time)
- Weather forecast indicated by six icons (Sunny, Partly Sunny, Cloudy, Rainy, Stormy, Snowy)
