

Walnut Banjo Barometer 46cm

Product Images

Short Description

Banjo barometers have been around since the mid 1800s, and are still the most popular design. The central dial shows the barometric pressure information, the top part is a temperature scale, and the bottom is a humidity dial. This TFA Dostmann barometer is German-made, and is of a beautiful quality.

This barometer is shipped from us in safe transportation mode, and will arrive to you unset. This is so that the needle does not move in transit, and therefore become damaged. On arrival, the barometer needs to be manually set to your local air pressure, which you can find online from various resources. This process is very simple, and can be done by simply turning a screw on the back to make the needle move to the required position. Once the barometer is set, it is ready for use.

Increasing pressure indicates good weather, with the chance of it being a little cold.

Decreasing pressure indicates that the weather is set to worsen - storms and winds are highly likely. Quick drops in pressure signify that a storm is imminent in the next several hours.

Description

Key Features

- Made in Germany
- Solid walnut wood
- With barometer, thermometer and hygrometer
- Precise Domatic-Barometer for weather forecast
- Monitoring of room temperature and humidity.

Colour: Walnut

Dimensions: 125 x 40 x 460mm

Diameter Of Dials: 108mm / 50mm

Weight: 515 Grams

Style: Banjo
