

TFA Chrome Barometer with Temperature & Humidity (13.5cm diameter)

Product Images

Short Description

This instrument consists of a barometer, thermometer and hygrometer & has the shape of a classic pocket watch.

The barometer measures air pressure and allows you to make a local weather forecast. As the air pressure increases, the weather improves, whilst you should expect bad weather with a decreasing air pressure. By controlling the indoor temperature and humidity you can create a comfortable and healthy room climate

and save on heating costs.

Description

Key Features

- Made in Germany
- Classic weather station with metal ring
- With barometer, thermometer and hygrometer
- Measures air pressure, temperature and humidity
- Precise Domatic-Barometer for weather forecast.

This barometer is designed for indoor use, and ideally should be wall mounted.

Increasing pressure indicates that the weather will be getting better with more warmer and dryer conditions.

Decreasing pressure indicates that the weather is set to worsen - with cloudy days and rainfall. Quick drops in pressure can signify that a storm is imminent in the next several hours.

Additional Information

Country of Manufacture	Germany
Brand	TFA Dostmann
Explanation	This barometer is shipped from us in safe transportation mode, and will arrive to you unset. This is so that the needle does not move in transit, and therefore become damaged. On arrival, the barometer needs to be manually set to your local air pressure, which you can find online from various resources. This process is very simple, and can be done by simply turning a screw on the back to make the needle move to the required position. Once the barometer is set, it is ready for use.
