Short Description

Walnut Barometer 19.5cm

Description

The barometer was invented back in the 17th century for laboratory use, and since then has become a popular household item. This wooden German-made barometer is of the highest quality.

The gold trimmed barometric pressure dial has a beautiful gold-tinted face, with an intricate dial, and delicately crafted hand.

This barometer is shipped from us in safe transportation mode, and will arrive to you unset. This is so that the needle does not move in transit, and therefore become damaged. On arrival, the barometer needs to be manually set to your local air pressure, which you can find online from various resources. This process is very simple, and can be done by simply turning a screw on the back to make the needle move to the required position. Once the barometer is set, it is ready for use.

Increasing pressure indicates that the weather will be getting better with more warmer and dryer conditions.

Decreasing pressure indicates that the weather is set to worsen - with cloudy days and rainfall. Quick drops in pressure can signify that a storm is imminent in the next several hours.

Additional Information

Brand	TFA Dostmann
Barometer Style	Traditional
Barometers Designed for	Indoor
Material	Wood
