

ACCUR8 A8-F007PF Pool/Spa/Pond Thermometer

Product Images

Short Description

Additional/replacement floating wireless water sensor for the ACCUR8 DWS7100 weather station. Features an LCD screen that displays the current water temperature.

Description

- The sensor displays and wirelessly transmits the water temperature to the display console of your ACCUR8 DWS7100 weather station.
- The eight channel selectable switch allows you to monitor water temperature from eight different locations.
- The screw-on lid with locking key design with double internal gaskets provide a leak free, water resistant design.
- Solar powered with battery back up extends the life of the battery.
